PROFILE

As a dedicated Software Engineering student, I focus on building robust, scalable applications from the ground up. I bridge the gap between intuitive front-end interfaces and efficient back-end architecture through my Fullstack development skills. Beyond just making things work, I have a keen interest in Cybersecurity, ensuring that the code I write isn't just functional, but secure by design. I am constantly seeking opportunities to apply my technical toolkit to solve real-world problems and contribute to secure digital ecosystems.

EDUCATION

2023-2028
ADAMA SCIENCE AND
TECHNOLOGY UNIVERSITY

- Bachelor of Software Engineering
- CGPA: 3.68 / 4.0

SKILLS

- Fullstack development
- frontend with react
- backend with Node.js(express.js) and Java(spring boot and servlet),Python(Django)
- Database both relational and non-relational databases like mysql,sql-server,postgresql and mongodb
- Junior Penetration testing

LANGUAGES

- English
- Amharic
- Afan Oromo

WORK EXPERIENCE

INSA Cyber Talent Center | Development Team Summer Camp 2024

- Applied secure coding standards across 35+ GitHub repositories, focusing on vulnerability mitigation and data integrity in Java and Python-based environments.
- Participated in 10 Capture The Flag (CTF) challenges, applying theoretical knowledge of network security and penetration testing to solve real-world security puzzles.

ASTU | Academic Project Lead 2023 - Present

- Architected and deployed 5+ high-impact full-stack applications, including a chat app(called negarit) and online examination system using Java (Spring Boot,Servlet) and React.
- Optimized data management by integrating SQL and MongoDB databases for various projects, ensuring efficient storage and retrieval for applications with complex data relations.
- Developed 10+ object-oriented applications in Java, Python, and C++, consistently maintaining a high code quality standard as evidenced by 200+ contributions on GitHub in the past year.

Personal Projects | Fullstack Developer

- Developed responsive, user-friendly websites and web applications, translating requirements into clean, deployable code.
- Implemented secure user authentication and authorization protocols to protect sensitive data(using JWT).
- Managed end-to-end development lifecycles, from UI design to backend logic and database management.
